Doomsday Engine - Feature #1376

Externally spawned mobjs

Description

I would like for Doomsday to support the ability to create new Things in a .ded file and simply add it to a specified folder and it automatically adds that Thing id into the game.

This would allow greater customization of Doom as you could simply add it to a pk3 and instantly create new Things in Doom without needing to have a long explanation of how to customize or overwrite Objects.ded

This has been available in Doomsday for a long time. Using DED you can even define entirely new monsters (as long as they use the existing actions).

Do you actually mean being able to create a list of THINGS in a DED, with coords, that will be spawned on a map addtionaly to those within the map THING lump?

Yes, I'm sorry I wasn't very clear on that one - that is what I was trying to say.

- *Tags set to Definitions, MapData, Scripting*

- *Subject changed from externally defined Things to Externally spawned mobjs*

This is already almost possible with a Map Info definition that executes a bunch of spawnmobj commands. The caveat is that the same command is executed also after loading a savegame.

A more correct approach would be to add a script that only gets run as part of map initialization.
